

Jeffrey Huang

j.huang.hxc@gmail.com ❖ (925) 201-9225 ❖ Pleasanton, CA ❖ Preferred Starting timeline: July-September, 2026

OBJECTIVE

Aspiring software engineer interested in full stack development, AI, and other emerging tech. Seeking full time SWE roles for 2026 and beyond, aiming to build impactful systems and grow alongside a collaborative, high-performing team.

EDUCATION

UCLA

Expected Jun. 2026

MS in Computer Science | Graduated June 2026 | GPA: 4.0

Los Angeles, CA

BS in Computer Science | Graduated June 2025 | GPA: 3.78, Regents Scholar, Upsilon Pi Epsilon (UPE) Honor Society

EXPERIENCE

Hewlett Packard Enterprise (HPE)

Jun. 2025 - Sep. 2025

Cloud Engineering | Internship

San Jose, CA

- Engineered an **internal enterprise RAG system** for proprietary HPE cloud documentation, combining **LangChain/LangGraph** workflows with **vector and graph-backed retrieval** to support technical question answering over private product knowledge.
- Designed and implemented an **automated LLM evaluation framework**, enabling **synthetic test set generation**, reproducible benchmark runs, and interactive analysis of **faithfulness, context precision, retrieval quality**, and generated answers through a Gradio dashboard.
- Advanced the retrieval pipeline by implementing **content-aware document chunking**, integrating **Neo4j** for graph-based **multi-hop retrieval**, and migrating the application from a Streamlit prototype toward a **scalable API-driven backend**.

Odele Technology Inc.

Jul. 2024 - Sep. 2024

Software Engineering | Internship

New York, NY (Remote)

- Shipped **frontend features and UI quality improvements** for Twygs, a startup creator monetization platform, using **React, Next.js, and Chakra UI** to improve **authentication, onboarding, email communication**, and content presentation flows.
- Redesigned the password management experience by expanding credential constraints, adding real-time validation feedback, and implementing dynamic UI indicators to help users understand and satisfy account security requirements.
- Strengthened product usability across **ticket-driven development cycles**, resolving layout defects, improving responsive component behavior, enhancing form inputs, styling transactional emails, and fixing embedded PDF rendering issues.

Multithreaded C++ Web Server

Apr. 2025 – Jun. 2025

Software Engineering | UCLA, Software Engineering Capstone

Los Angeles, CA

- Engineered a **multithreaded C++ HTTP server** with **configurable routing**, request parsing, **session support**, static content serving, **CRUD endpoints**, and modular handlers for extensible application logic.
- Implemented production-style backend infrastructure, including **Dockerized Google Cloud deployment, CI/CD automation, structured logs, health-check endpoints, dependency injection**, mocked testing, and coverage tracking.
- Delivered the system through a team-based engineering process with tech-lead planning, **Gerrit code reviews**, milestone-based development, and iterative validation against evolving server requirements.

UC-Lavatory

Sep. 2022 – Dec. 2022

Full Stack Development | UCLA, Software Construction

Los Angeles, CA

- Co-developed UC-Lavatory, a **location-based full-stack review application** for UCLA campus restrooms, featuring an **interactive React Leaflet map**, building-linked restroom pages, and **structured multi-attribute ratings** across 15+ campus buildings.
- Led **Express.js/MySQL backend development** by designing RESTful CRUD endpoints, relational data flows, and request handling logic for retrieving, submitting, and displaying building, restroom, and review data.

TECHNICAL SKILLS

- Languages: Python, Java, C++, JavaScript, SQL
- Web & Backend: React, Next.js, Express.js, Spring Boot, REST APIs
- Databases & Infra: PostgreSQL, MySQL, Liquibase, Docker, Git, Google Cloud
- AI & Tools: PyTorch, OpenAI API, Retrieval-Augmented Generation (RAG), AGILE
